Q.1 [11746091]

Surojit Ghosh left his IT job last year and started a food business with his wife Debjani. They named the business "Bong's Kitchen". Surojit takes 4(1/5) hours more when he works alone compared to when he works jointly with his wife. On the other hand, Debjani takes 28(1/5) hours more than what she takes when she works with Surojit. How long approximately will it take, Surojit to complete the business work alone?

1 ☐ 6 hours

2 ☐ 9 hours

3 ☐ 12 hours

4 ☐ 15 hours

Q.2 [11746091]

Suhani, an enterprising lady took the loan from M/s Koramattam Finance against her gold ornaments at a simple interest of 12% per annum for 2 years. She, then, loaned 50% of amount received from M/s Koramattam Finance, to Vishamber at the rate of 16% per annum compounded half yearly for 2 years and the remaining amount to Kalawati at the rate of 12% per annum compounded annually for 2 years. What was the approximate percentage earning of Suhani at the end of 2 years?

1 ☐ 42%

2 ☐ 28%

3 ☐ 50%

4 ☐ 60%

Q.6 [11746091]

A water tanker can be filled by 2 pipes A & B separately in 16 min & 32 min respectively. Outlet of the tanker is partially open and it can empty the full tanker completely in 1 hour min. Pipes A & B were opened simultaneously for 9 min to fill the tanker but the partially open outlet was not closed. After 9 min the pipes A & B were closed and the tanker then to Mohan's house, 6 km away to deliver water. If the tanker moved at a constant speed of 36 km/hr, approximately what percentage of tanker was full, when it reached Mohan's house?

1 ☐ 55%

2 ☐ 63%

3 ☐ 58%

4 ☐ None of the options

Directions for questions 26 to 29: Read the passage and answer the questions.

The Reverend Jim Jones was the founder and leader of the People's Temple. In 1978 Jones, facing charges of tax evasion, moved most of his one thousand followers from San Francisco to a small settlement in Guyana, which he named Jonestown. Facing a federal investigation for reported acts of child abuse and torture. Jones decided that his follow should poison their children and then themselves. They prepared vats of poison. A few people resisted; a few others shouted out their protest, but they were silenced. Following Jones's orders, and the social pressures imposed by one another, mothers and fathers duly poisoned their children. Then they poisoned themselves. Their bodies were found arm in arm, lying together. Econs (and some economists we know) are pretty unsociable creatures. They communicate with others if they can gain something from the encounter, they about their reputations, and they will learn from others if actual information can be obtained, but Econs are not followers of fashion. Their hemlines would not go up and down e for practical reasons, and ties, if they existed at all in a world of Econs, would not grow narrower and wider simply as a matter of style. (By the way, ties were originally used as napkins; they actually had a function.) Humans, on the other hand, are frequently nudged by other Humans. Sometimes massive social changes, in markets and politics alike, st with a small social nudge.

Humans are not exactly lemmings, but they are easily influenced by the statements and deeds of others. (Again by the way, lemmings do not really commit mass suicide by follo one another into the ocean. Our widely shared and somewhat defamatory beliefs about lemmings are based on an all- too-human urban legend-that is, people believe this becau they are following other people. By contrast, the tale of mass suicide at Jonestown is no legend.) If you see a movie scene in which people are smiling, you are more likely to sm yourself (whether or not the movie is funny); yawns are contagious, too. Conventional wisdom has it that if two people live together for a long time, they start to look like each ot This bit of folk wisdom turns out to be true. (For the curious: they grow to look alike partly because of nutrition-shared diets and eating habits-but much of the effect is simple imitation of facial expressions.) In fact couples who end up looking alike also tend to be happier! Here, we try to understand how and why social influences work. An understand those influences is important in our context for two reasons. First, most people learn from others. This is usually good, of course. Learning from others is how individuals and societies develop. But many of our biggest misconceptions also come from others. When social influences have caused people to have false or biased beliefs, then some nudg may help. The second reason why this topic is important for our purposes is that one of the most effective ways to nudge (for good or evil) is via social influence. In Jonestown, influence was so strong that an entire population committed suicide. But social influences have also created miracles, large and small. In many cities, including ours, dog owner now carry plastic bags when they walk their dogs, and strolling through the park has become much more pleasant as a result. This has happened even though the risk of being f for unclean dog walking is essentially zero. Choice architects need to know how to encourage other socially beneficial behavior, and also how to discourage events like the one t occurred in Jonestown. Social influences come in two basic categories. The first involves information. If many people do something or think something, their actions and their thoughts convey information about what might be best for you to do or think. The second involves peer pressure. If you care about what other people think about you (perhaps i mistaken belief that they are paying some attention to what you are doing-see below), then you might go along with the crowd to avoid their wrath or curry their favor. For a quick glance at the power of social nudges, consider just a few research findings:

1. Teenage girls who see that other teenagers are having children are more likely to become pregnant themselves.
2. Obesity is contagious. If your best friends get fat, your risk of gaining weight goes up.
3. Broadcasters mimic one another, producing otherwise inexplicable fads in programming. (Think reality television. American Idol and its siblings, game shows that come and c the rise and fall and rise of science fiction, and so forth.)
4. The academic effort of college students is influenced by their peers, so much so that the random assignments of first-year students to dormitories or roommates can have bi consequences for their grades and hence on their future prospects. (Maybe parents should worry less about which college their kids go to and more about which roommate the get.)
5. Federal judges on three-judge panels are affected by the votes of their colleagues. The typical Republican appointee shows pretty liberal voting patterns when sitting with two Democratic appointees, and the typical Democratic appointee shows pretty conservative voting patterns when sitting with two Republican appointees. Both sets of appointees s far more moderate voting patterns when they are sitting with at least one judge appointed by a president of the opposing political party.

The bottom line is that Humans are easily nudged by other Humans. Why? One reason is that we like to conform.

Q.26 [11746091]

Identify the CORRECT statement:

- 1 ☐ Obesity is sporadic.
- 2 ☐ Learning from others is good as it helps in the development of individuals and societies.
- 3 ☐ Similar looking couples seldom apery each other's facial expression.
- 4 ☐ Obesity may often be the result of information provided by peers.

Social influences come in two basic categories. The first involves information. If many people do something or think something, their actions and their thoughts convey information about what might be best for you to do or think. The second involves peer pressure. If you care about what other people think about you (perhaps in a mistaken belief that they are paying some attention to what you are doing—see below), then you might go along with the crowd to avoid their wrath or curry their favor. For a quick glance at the power of social nudges, consider just a few research findings:

1. Teenage girls who see that other teenagers are having children are more likely to become pregnant themselves.
 2. Obesity is contagious. If your best friends get fat, your risk of gaining weight goes up.
 3. Broadcasters mimic one another, producing otherwise inexplicable fads in programming. (Think reality television. American Idol and its siblings, game shows that come and go, the rise and fall and rise of science fiction, and so forth.)
 4. The academic effort of college students is influenced by their peers, so much so that the random assignments of first-year students to dormitories or roommates can have big consequences for their grades and hence on their future prospects. (Maybe parents should worry less about which college their kids go to and more about which roommate they get.)
 5. Federal judges on three-judge panels are affected by the votes of their colleagues. The typical Republican appointee shows pretty liberal voting patterns when sitting with two Democratic appointees, and the typical Democratic appointee shows pretty conservative voting patterns when sitting with two Republican appointees. Both sets of appointees show far more moderate voting patterns when they are sitting with at least one judge appointed by a president of the opposing political party.
- The bottom line is that Humans are easily nudged by other Humans. Why? One reason is that we like to conform.

Q.28 [11746091]

Main idea in the passage is about:

- 1 ☐ Causes and prevention of mass suicide.
- 2 ☐ Mindset problems of some economists.
- 3 ☐ Contagious nature of human emotion.
- 4 ☐ Behavior is the result of following the herd.

Directions for questions 26 to 29: Read the passage and answer the questions.

The Reverend Jim Jones was the founder and leader of the People's Temple. In 1978 Jones, facing charges of tax evasion, moved most of his one thousand followers from San Francisco to a small settlement in Guyana, which he named Jonestown. Facing a federal investigation for reported acts of child abuse and torture. Jones decided that his follow should poison their children and then themselves. They prepared vats of poison. A few people resisted; a few others shouted out their protest, but they were silenced. Following Jones's orders, and the social pressures imposed by one another, mothers and fathers duly poisoned their children. Then they poisoned themselves. Their bodies were found arm in arm, lying together. Econs (and some economists we know) are pretty unsociable creatures. They communicate with others if they can gain something from the encounter, they about their reputations, and they will learn from others if actual information can be obtained, but Econs are not followers of fashion. Their hemlines would not go up and down e for practical reasons, and ties, if they existed at all in a world of Econs, would not grow narrower and wider simply as a matter of style. (By the way, ties were originally used as napkins; they actually had a function.) Humans, on the other hand, are frequently nudged by other Humans. Sometimes massive social changes, in markets and politics alike, st with a small social nudge.

Humans are not exactly lemmings, but they are easily influenced by the statements and deeds of others. (Again by the way, lemmings do not really commit mass suicide by foll one another into the ocean. Our widely shared and somewhat defamatory beliefs about lemmings are based on an all- too-human urban legend-that is, people believe this becau they are following other people. By contrast, the tale of mass suicide at Jonestown is no legend.) If you see a movie scene in which people are smiling, you are more likely to sm yourself (whether or not the movie is funny); yawns are contagious, too. Conventional wisdom has it that if two people live together for a long time, they start to look like each ot This bit of folk wisdom turns out to be true. (For the curious: they grow to look alike partly because of nutrition-shared diets and eating habits-but much of the effect is simple imitation of facial expressions.) In fact couples who end up looking alike also tend to be happier! Here, we try to understand how and why social influences work. An understand those influences is important in our context for two reasons. First, most people learn from others. This is usually good, of course. Learning from others is how individuals and societies develop. But many of our biggest misconceptions also come from others. When social influences have caused people to have false or biased beliefs, then some nudg may help. The second reason why this topic is important for our purposes is that one of the most effective ways to nudge (for good or evil) is via social influence. In Jonestown, influence was so strong that an entire population committed suicide. But social influences have also created miracles, large and small. In many cities, including ours, dog owner now carry plastic bags when they walk their dogs, and strolling through the park has become much more pleasant as a result. This has happened even though the risk of being f for unclean dog walking is essentially zero. Choice architects need to know how to encourage other socially beneficial behavior, and also how to discourage events like the one t occurred in Jonestown. Social influences come in two basic categories. The first involves information. If many people do something or think something, their actions and their thoughts convey information about what might be best for you to do or think. The second involves peer pressure. If you care about what other people think about you (perhaps i mistaken belief that they are paying some attention to what you are doing-see below), then you might go along with the crowd to avoid their wrath or curry their favor. For a quick glance at the power of social nudges, consider just a few research findings:

1. Teenage girls who see that other teenagers are having children are more likely to become pregnant themselves.
2. Obesity is contagious. If your best friends get fat, your risk of gaining weight goes up.
3. Broadcasters mimic one another, producing otherwise inexplicable fads in programming. (Think reality television. American Idol and its siblings, game shows that come and c the rise and fall and rise of science fiction, and so forth.)
4. The academic effort of college students is influenced by their peers, so much so that the random assignments of first-year students to dormitories or roommates can have bi consequences for their grades and hence on their future prospects. (Maybe parents should worry less about which college their kids go to and more about which roommate the get.)
5. Federal judges on three-judge panels are affected by the votes of their colleagues. The typical Republican appointee shows pretty liberal voting patterns when sitting with two Democratic appointees, and the typical Democratic appointee shows pretty conservative voting patterns when sitting with two Republican appointees. Both sets of appointees s far more moderate voting patterns when they are sitting with at least one judge appointed by a president of the opposing political party.

The bottom line is that Humans are easily nudged by other Humans. Why? One reason is that we like to conform.

Q.29 [11746091]

Given below are four statements

Statement I : Republican appointees are conservative.

Statement II : Democratic appointees are liberal.

Statement III : Three judge panels are known for inaccurate decisions.

Statement IV : Dormitory students are better performers in college.

In light of the above statements, choose the **most appropriate** answer from the options given below

1 ☐ (III) and (IV) are correct.

2 ☐ (III) and (IV) are incorrect.

3 ☐ (I) and (II) are incorrect.

4 ☐ (I) and (III) are correct.

Directions for questions 30 to 33: Read the passage and answer the questions.

Cultural arguments once loomed large in explanations of the ways in which countries differed economically and politically. Economists mostly abandoned such reasoning in the century, not only because it provided cover for racists but also because of its lack of explanatory power. In 1970 Robert Solow, a Nobel prize winner, quipped that attempts to explain growth with variables such as culture generally ended up "in a blaze of amateur sociology". This position is changing, however, and not before time. A better grasp of how culture work may be needed to understand modern political economy.

The responsible intellectual use of cultural argument begins with clear terminology. In "A Culture of Growth", published in 2016, Joel Mokyr, an economic historian at Northwestern University describes culture as a set of beliefs, values, and preferences, capable of affecting behaviour, that are socially (not genetically) transmitted and that are shared by some subset of society". Economists typically treat rational self-interest as the lodestar of human behaviour. But Mr Mokyr recognises that acquired social codes also influence individual choices, and thus broader economic activity. Culture is not immutable, as those who ascribe countries' diverging fates to deep-rooted cultural attributes often suggest. It evolves: the ideas and influence of different groups shift.

Cultural evolution is essential to the thesis of "A Culture of Growth", which attempts to explain why sustained growth began where and when it did. Mr Mokyr says that factors of credit with kick-starting industrialisationsuch as capital accumulation and the cost and supply of certain kinds of labour- may be necessary but are not sufficient. The true catalyst was a continent-wide evolution in beliefs. In Europe between the 16th and 18th centuries, a group of intellectuals often called the "Republic of Letters" groped their way towards a bold new view of nature and knowledge. Francis Bacon, an English intellectual and early contributor to the movement, thought that through disinterested and open inquiry, nature's secrets could be understood and then manipulated to the benefit of humankind. Such views helped nurture the Scientific Revolution and the Enlightenment, but also percolated through society, influencing behaviour. Once the notion became widespread that objective knowledge was possible and could be used to improve people's lives, the emergence of self-sustaining economic growth was nearinevitable.

In a recent essay Enrico Spolaore of Tufts University writes that Mr Mokyr's ideas show how economists might make better use of culture. He does not simply argue that Europe industrialized first because of a particular European cultural way of being. Rather, he identifies a specific cultural change - the rise of an evidence-based, humanistic approach to scientific inquiry- which led to a shift in behaviour that enabled industrialisation. He contrasts this with, for example, China, where rationalistic schools of philosophy such as Mohism were eclipsed in intellectual circles by tradition-venerating Confucianism. China's fate is not down to something inherent in Chinese culture. Rather, history unfolded one way in one place, and another in another.

Q.30 [11746091]

The following statement best captures the theme of the passage:

- 1 ☐ Scientific revolution and enlightenment in Europe
- 2 ☐ Confucianism and Mohism in China
- 3 ☐ History unfolds in different ways in different countries
- 4 ☐ A society's values and beliefs matter for its economy

Directions for questions 30 to 33: Read the passage and answer the questions.

Cultural arguments once loomed large in explanations of the ways in which countries differed economically and politically. Economists mostly abandoned such reasoning in the century, not only because it provided cover for racists but also because of its lack of explanatory power. In 1970 Robert Solow, a Nobel prize winner, quipped that attempts to explain growth with variables such as culture generally ended up "in a blaze of amateur sociology". This position is changing, however, and not before time. A better grasp of how culture work may be needed to understand modern political economy.

The responsible intellectual use of cultural argument begins with clear terminology. In "A Culture of Growth", published in 2016, Joel Mokyr, an economic historian at Northwestern University describes culture as a set of beliefs, values, and preferences, capable of affecting behaviour, that are socially (not genetically) transmitted and that are shared by some subset of society". Economists typically treat rational self-interest as the lodestar of human behaviour. But Mr Mokyr recognises that acquired social codes also influence individual choices, and thus broader economic activity. Culture is not immutable, as those who ascribe countries' diverging fates to deep-rooted cultural attributes often suggest. It evolves: the ideas and influence of different groups shift.

Cultural evolution is essential to the thesis of "A Culture of Growth", which attempts to explain why sustained growth began where and when it did. Mr Mokyr says that factors of credit with kick-starting industrialisationsuch as capital accumulation and the cost and supply of certain kinds of labour- may be necessary but are not sufficient. The true catalyst was a continent-wide evolution in beliefs. In Europe between the 16th and 18th centuries, a group of intellectuals often called the "Republic of Letters" groped their way towards a bold new view of nature and knowledge. Francis Bacon, an English intellectual and early contributor to the movement, thought that through disinterested and open inquiry, nature's secrets could be understood and then manipulated to the benefit of humankind. Such views helped nurture the Scientific Revolution and the Enlightenment, but also percolated through society, influencing behaviour. Once the notion became widespread that objective knowledge was possible and could be used to improve people's lives, the emergence of self-sustaining economic growth was nearinevitable.

In a recent essay Enrico Spolaore of Tufts University writes that Mr Mokyr's ideas show how economists might make better use of culture. He does not simply argue that Europe industrialized first because of a particular European cultural way of being. Rather, he identifies a specific cultural change - the rise of an evidence-based, humanistic approach to scientific inquiry- which led to a shift in behaviour that enabled industrialisation. He contrasts this with, for example, China, where rationalistic schools of philosophy such as Mohism were eclipsed in intellectual circles by tradition-venerating Confucianism. China's fate is not down to something inherent in Chinese culture. Rather, history unfolded one way in China, and another in another.

Q.33 [11746091]

Enrico Spolaore believes :

- 1 ☐ A cultural change that supported scientific enquiry was behind Europe's industrialisation
- 2 ☐ A rationalist school of philosophy could never rise in Europe
- 3 ☐ A rationalist school of philosophy thrived in China
- 4 ☐ Confucianism got eclipsed by Mohism in China

Directions for questions 34 to 37: Read the passage and answer the questions.

To say that all individuals are embedded in and the product of society is banal. Obama rises above banality by means of fallacy: equating society with government, the collectivity with the state. Of course we are shaped by our milieu. But the most formative, most important influence on the individual is not government. It is civil society, those elements of collectivity that lie outside government: family, neighborhood, church, Rotary club, PTA, the voluntary associations that Tocqueville understood to be the genius of America and source of its energy and freedom. Moreover, the greatest threat to a robust, autonomous civil society is the ever-growing Leviathan state and those like Obama who see it as the ultimate expression of the collective. Obama compounds the fallacy by declaring the state to be the font of entrepreneurial success. How so? It created the infrastructure- roads bridges, schools. Internet-off which we all thrive. Absurd. We don't credit the Swiss postal service with the Special Theory of Relativity because it transmitted Einstein's manuscript in the Annalen der Physik. Everyone drives the roads, goes to school, uses the mails. So did Steve Jobs. Yet only he created the Mac and the iPad.

Obama's infrastructure argument is easily refuted by what is essentially a controlled social experiment. Roads and schools are the constant. What's variable is the energy, enterprising risk-taking, hard work and genius of the individual, it is therefore precisely those individual characteristics, not the communal utilities that account for the different outcomes. The ultimate Obama fallacy, however, is the conceit that belief in the value of infrastructure and willingness to invest in its creation and maintenance is what divides liberals from conservatives.

More nonsense. Infrastructure is not a liberal idea, nor is it particularly new. The Via Appia was built 2,300 years ago. The Romans built aqueducts, too. And sewers. Since forever infrastructure has been consensually understood to be a core function of government. The argument between left and right is about what you do beyond infrastructure. It's about transfer payments and redistributionist taxation, about geometrically expanding entitlements, about tax breaks and subsidies to induce actions pleasing to central planners. It's free contraceptives for privileged students and welfare without work- the latest Obama entitlement-by-decree that would fatally undermine the great bipartisan welfare reform of 1996.

What divides liberals and conservatives is not roads and bridges but Julia's world, an Obama campaign creation that may be the most self-revealing parody of liberalism ever conceived. It's a series of cartoon illustrations in which a fictional Julia is swaddled and subsidized throughout her life by an all-giving government of bottomless pockets and "Queen for a Day" magnanimity. At every stage, the state is there to provide-preschool classes and cut-rate college loans, birth control and maternity care, business loans and retirement. The only time she's on her own is at her grave site. Julia's world is totally atomized. It contains no friends, no community and, of course, no spouse. Who needs one? married to the provider state. Or to put it slightly differently, the "Life of Julia" represents the paradigmatic Obama political philosophy: citizen as orphan child. For the conservative providing for every need is the duty that government owes to actual orphan children. Not to supposedly autonomous adults. Beyond infrastructure, the conservative sees the proper role of government as providing not European-style universal entitlements but a firm safety net, meaning Julia-like treatment for those who really cannot make it on their own- too young or too old, too mentally or physically impaired, to provide for themselves.

Limited government so conceived has two indispensable advantages. It avoids inexorable European-style national insolvency. And it avoids breeding debilitating individual dependency. It encourages and celebrates character, independence, energy, hard work as the foundations of a free society and a thriving economy- precisely the virtues Obama discounts and devalues in his accounting of the wealth of nations.

Q.34 [11746091]

The primary objective of the passage is to:

- 1 ☐ Praise the policy of Obama government
- 2 ☐ Present an argument for a provider government
- 3 ☐ Discuss the role and duties of a Government
- 4 ☐ Assess the differences between liberals and conservatives regarding their political philosophy only

Moreover, the greatest threat to a robust, autonomous civil society is the ever-growing Leviathan state and those like Obama who see it as the ultimate expression of the collective. Obama compounds the fallacy by declaring the state to be the font of entrepreneurial success. How so? It created the infrastructure- roads bridges, schools. Internet-off which we all thrive. Absurd. We don't credit the Swiss postal service with the Special Theory of Relativity because it transmitted Einstein's manuscript in the Annalen der Physik. Everyone drives the roads, goes to school, uses the mails. So did Steve Jobs. Yet only he created the Mac and the iPad.

Obama's infrastructure argument is easily refuted by what is essentially a controlled social experiment. Roads and schools are the constant. What's variable is the energy, enterprising risk-taking, hard work and genius of the individual, it is therefore precisely those individual characteristics, not the communal utilities that account for the different outcomes. The ultimate Obama fallacy, however, is the conceit that belief in the value of infrastructure and willingness to invest in its creation and maintenance is what divides liberals from conservatives.

More nonsense. Infrastructure is not a liberal idea, nor is it particularly new. The Via Appia was built 2,300 years ago. The Romans built aqueducts, too. And sewers. Since forever infrastructure has been consensually understood to be a core function of government. The argument between left and right is about what you do beyond infrastructure. It's about transfer payments and redistributionist taxation, about geometrically expanding entitlements, about tax breaks and subsidies to induce actions pleasing to central planners. It's free contraceptives for privileged students and welfare without work- the latest Obama entitlement-by-decree that would fatally undermine the great bipartisan welfare reform of 1996.

What divides liberals and conservatives is not roads and bridges but Julia's world, an Obama campaign creation that may be the most self-revealing parody of liberalism ever conceived. It's a series of cartoon illustrations in which a fictional Julia is swaddled and subsidized throughout her life by an all-giving government of bottomless pockets and "Queen for a Day" magnanimity. At every stage, the state is there to provide-preschool classes and cut-rate college loans, birth control and maternity care, business loans and retirement. The only time she's on her own is at her grave site. Julia's world is totally atomized. It contains no friends, no community and, of course, no spouse. Who needs one? married to the provider state. Or to put it slightly differently, the "Life of Julia" represents the paradigmatic Obama political philosophy: citizen as orphan child. For the conservative providing for every need is the duty that government owes to actual orphan children. Not to supposedly autonomous adults. Beyond infrastructure, the conservative sees the proper role of government as providing not European-style universal entitlements but a firm safety net, meaning Julia-like treatment for those who really cannot make it on their own- too young or too old, too mentally or physically impaired, to provide for themselves.

Limited government so conceived has two indispensable advantages. It avoids inexorable European-style national insolvency. And it avoids breeding debilitating individual dependency. It encourages and celebrates character, independence, energy, hard work as the foundations of a free society and a thriving economy- precisely the virtues Obama discounts and devalues in his accounting of the wealth of nations.

Q.37 [11746091]

According to the passage, which of the following statement is false?

- 1 ☐ Leviathan state is not a harbinger of prosperity.
- 2 ☐ Building Infrastructure is not a liberal idea.
- 3 ☐ European governments do not provide privileges to all.
- 4 ☐ Provider state debilitates individual character.

Directions for questions 38 to 41: Read the passage and answer the questions.

As Western holiday makers escape their daily grind and head to the beach this summer, a concern is likely to resurface- literally really, if it washes up on the pristine sand in front of them. In the past two years plastic litter in the ocean seems to have eclipsed other environmental anxieties among rich-world consumers. Harrowing images of sea life ensnared in plastic bags, as depicted in "Blue Planet II", a popular British television series from 2017 presented by Sir David Attenborough, would be enough to make any one choke on the plastic straw in their pina colada-if, that is, you were offered one. Politicians everywhere are responding to voters' demands by banning straws, stirrers and other single-use plastics. The Guardian says that last year 127 countries had restrictions on plastic bags. This month Panama became the first Central American country to outlaw them. Britain is considering a tax on plastic packaging made with less than 30% recycled content. In March 560 members of the European Parliament backed a law that would require 90% of plastic bottles to be recycled by 2029. Just 35 voted against.

Given the environmental footprint of substitutes like cotton bags, aluminium cans or paper boxes- which often require more energy and water to make and transport than plastic equivalents- new regulations could in fact end up doing harm to the planet. Nonetheless the plastics industry can expect ever more curbs on its products, a trend that will force businesses involved to reshape. Bottles, boxes, films and the like consume nearly half of global output of the polymers on which they rely. Many companies in the \$375bn plastic packaging value chain-which comprises producers of oil and gas (the main feedstock), petrochemical giants packaging firms and consumer brands-look ill-prepared.

Companies at either end of the chain are the least vulnerable. Beverage-makers will happily switch from oil-derived plastic to recycled stuff for their bottles-or to aluminium cans as long as the numbers add up (which they do when high oil prices push up the cost of virgin plastic). Even so, ExxonMobil or Coca-Cola cannot relax. Seema Suchak of Schroders, asset manager, estimates that fizzy-drinks firms that fail to reduce their reliance on virgin plastics could see annual profits shrink by 5% over the next decade or so because of regulations and taxes spurred by the consumer backlash. According to Paul Bjacek of Accenture, a consultancy, recycling all plastic packaging, rather than the 1% that is reused today could cut annual growth in demand for oil and gas from 1% to 0.5% by 2040 as recycled materials gain market share.

Plastic packaging firms could suffer more. Credit-raters at Moody's have warned that Britain's proposed tax on plastic bottles could hurt their makers by discouraging use by consumer goods companies and driving up the cost of recycled plastic, a scarce raw material as recycling rates are low. Ms Suchak looked at five big makers of plastic packaging and found that the pre-tax profits of four of them could fall by 11-33% in the medium term if they stick with virgin plastics. Amcor, an Australian giant, lists environmental concern as the number-one risk in its latest annual report.

Then there is the petrochemicals industry. In a much-cited analysis from 2016, consultants at McKinsey calculated that the value of plastic disposed after a single use is \$80bn a year. Reducing the number could benefit society but harm purveyors of the virgin materials. Last year Spencer Dale, chief economist of BP, a British oil giant, estimated that much plastics regulation could reduce demand for petrochemicals by a sixth in the next 20 years. Around a quarter of the revenues of Germany's BASF and DuPont of America come from plastic. Both could suffer.

Q.38 [11746091]

The political response to the people's environmental concern is:

- 1 ☐ Promote single use plastic packaging
- 2 ☐ Encouraging recycled plastics in packaging
- 3 ☐ Banning virgin plastics
- 4 ☐ Banning petrochemicals used in plastics

Around a quarter of the revenues of Germany's BASF, DowDuPont of America come from plastic. Both could suffer.

Q.40 [11746091]

The new regulations on Plastic Packaging could end up doing more harm to the planet because:

1 ☐ It will disrupt the plastic packaging value chain.

2 ☐ The prices of consumer products will increase.

3 ☐ Environmental footprints of substitutes is higher.

4 ☐ Recycled plastic is not safe to use.

Around a quarter of the revenues of Germany's BASF, Dow and DuPont of America come from plastic. Both could suffer.

Q.41 [11746091]

According to the author, the plastic related concerns in the rich countries have:

- 1 ☐ Overshadowed other environmental concerns
- 2 ☐ Created a strong lobby to resist any law that harms the interest of plastic packaging industry
- 3 ☐ Made plastic packaging industry to abandon the use of plastic
- 4 ☐ Made credit rating agencies and consultancy firms to advise the governments to not to act

Q.48 [11746091]

Use the following table

| | | | | | |
|-------|-----------|--------|------------|--------|-----------|
| (i) | Coagulate | (vi) | Vacillate | (xi) | Facetious |
| (ii) | Veritable | (vii) | Burlesque | (xii) | Obeisance |
| (iii) | Obstinacy | (viii) | Grotesque | (xiii) | Charlatan |
| (iv) | Obfuscate | (ix) | Marsupial | (xiv) | Panegyric |
| (v) | Parochial | (x) | Connivance | (xv) | Spasmodic |

Complete the crossword using words from the above table. There are more words than required.

Hints:

Across:

- (a) Strange or ugly in a way that's not natural
(b) Narrow-minded; Provincial; Insular Down:

- (a) Absolute; Genuine; Authentic; Actual
(b) Humorous; Light-hearted; Flippant
(c) a piece of writing or speech praising somebody/ something

Choose the correct option :

- 1 ☐ Across : (a) - (i); (b) - (ix);
Down : (a) - (ii); (b) - (xiv); (c) - (vi)
- 2 ☐ Across : (a) - (viii); (b) - (iv);
Down : (a) - (iii); (b) - (xiii); (c) - (xiv)
- 3 ☐ Across : (a)-(viii); (b) - (v);
Down : (a) - (ii); (b) - (xi); (c) - (xiv)
- 4 ☐ Across ; (a) - (vii); (b) - (v);

Directions for questions 77 to 80: Answer the questions based on the information provided.

100 families planned wedding on 21st December 2020 at 9 pm, an auspicious day and time in New Delhi and booked a marriage hall online in Chattarpur Farms. Due to a techni glitch the hall was booked simultaneously for 64 families who received a confirmation with a deposit of Rs. 1 Lakh each. The management on identifying the glitch was troubled contacted the families for a refund but the families were not ready to accommodate. The management and the families then mutually agreed to have a toss in order to decide w family will be finally allotted the venue. Certain directions regarding holding the toss are as follows:

1. The families were allotted a number from 1 to 64 in alphabetical ascending order of their names.
2. It was further decided, Family 1 will have a toss with Family 64 and is considered as Toss 1. Toss 2 will be between Family 2 and Family 63 and Toss 3 between Family 3 and Family 62 and so on.
3. The winner of each toss moves to the next round and the winner of Toss 1 will now have a toss with winner of Toss 32, winner of Toss 2 with Toss 31 and so on.
4. The remaining rounds of toss are in ascending order i.e. winner of Toss 1 with Toss 2, winner of Toss 3 with Toss 4 and so till there is one winner.
5. It was also decided that if the final winner withdraws and hands over the venue to the other finalist, the winner will be given Rs. 1.5 Lakh over and above the refund amount.

Q.77 [11746091]

From the following, which family in descending order can have the toss with Family 12 in finals?

- 1 ☐ 62
- 2 ☐ 60
- 3 ☐ 63
- 4 ☐ 61

Directions for questions 81 and 82: Answer the questions based on the information provided.

In a department of a hospital, Amir, Sahil, Vaibhav and Gaurav are doctors and each of them has a duty from 9 am of Day 1 to 9 am of Day 2 for 24 hours in the same order one after the other. After each duty, the doctor gets an off for 3 days, including the day he is relieved from duty. For example, if Amir has a duty on Monday, his next duty will now fall on Friday and this rotation goes on.

Q.82 [11746091]

If on 10th July 2020, Gaurav was on duty, who will be on duty on 26th September 2020?

1 ☐ Amir

2 ☐ Sahil

3 ☐ Vaibhav

Directions for questions 83 to 86: Answer the questions based on the information provided.

In an ICU with a capacity of 8 patients, due to COVID-19, beds were arranged in a circular pattern. Thus, now at a time 8 patients can be accommodated. As a basic measure, patients are administered with an IV fluid replacement which as per medical guidelines is 25-30 ml/kg per day. A senior doctor explained to a new intern the amount of IV fluid replacement for each patient but the intern mixes up the doses. From the information given below, help the intern to administer right doses to each patient.

1. On a given day, 4 married couples were admitted to the ICU namely, A, B, C, D, E, F, G and H.
2. A, D, E and F are males and the rest are females. Males are married to females. Each patient was prescribed a replacement from among 25, 28 and 30 ml/kg not necessarily in the same order.
3. Any 2 couples do not have the same dose and are neither adjacent nor opposite to each other.
4. A, who was prescribed 30 ml/kg was opposite C while E who was prescribed 28 ml/kg was opposite G and E's spouse was prescribed 25 ml/kg.
5. H is married to F, while D who was not prescribed 25 ml/kg is not married to G.
6. B who was prescribed 30 ml/kg was to the immediate left of C and also to the immediate right of the spouse of C.
7. None of the 4 males receive IV replacement lower than 28 ml/kg while there is one male patient between B and their spouse.
8. A's spouse receives a replacement of 28 ml/kg same as that of F's spouse, who are next to each other.

Q.83 [11746091]

Who among the following is adjacent to A?

1 ☐ D2 ☐ G3 ☐ B4 ☐ E
