Section-1

Sec 1

Direction (1-4): Study the following information and answer the questions that follow:

There is something irksome about a recent story in the New York Times that declared that "E-Books Make Readers Feel Less Isolated". Being a bookworm is uncool, the story alleges, but carrying around an e-reader makes reading seem chic.

"Strangers constantly ask about it," Michael Hughes, a communications associate at Johns Hopkins Bloomberg School of Public Health in Baltimore, said of his iPad, which he uses to read a mix of novels and nonfiction. "It's almost like having a new baby."

The problem here is not with the e-book. I'm in favour of any mode of literature delivery. If the only way I could consume Tolstoy was by having a trail of ants marching across my desk, each hoisting a piece of rice inscribed with the relevant word, that would be grand. Also, amazing. Also, impractical. Rather, I'm intrigued by the notion that e-readers make reading less antisocial. Doesn't reading necessitate not socialising? Indeed, isn't that part of the appeal?

I was always under the impression that books served a dual purpose: not only do they offer a world to enter, but also they offer an affordable means of escape from the world we're in. What a nice cloak a book can be on the subway or the train, or while sitting at a bar, enjoying the buzz of humanity while absorbed in something else. I'm reminded of Anne Tyler's "The Accidental Tourist", in which books are recommended as props for travellers who would rather avoid idle chatter with strangers.

Jonathan Franzen had something powerful to say about this in Lev Grossman's cover story about him in Time. Though few would hold Mr Franzen up as a beacon of joyful, social living (the man describes writing as "miserable work" and counts bird-watching as one of his few indulgences), he is convincing in his case for the importance of the sustained concentration demanded by reading.

"We are so distracted by and engulfed by the technologies we've created, and by the constant barrage of socalled information that comes our way, that more than ever to immerse yourself in an involving book seems socially useful... The place of stillness that you have to go to to write, but also to read seriously, is the point where you can actually make responsible decisions, where you can actually engage productively with an otherwise scary and unmanageable world."

Books require a certain quiet, a solitude that is all the more valuable for the way it can be achieved in public. The constant barrage of information Mr Franzen describes makes the insularity of a good book all the more valuable, like an antidote.

Still, few may be inspired to follow Mr Franzen's approach for keeping the siren song of the internet at bay. "What you have to do," he explained, "is you plug in an Ethernet cable with superglue, and then you saw off the little head of it."

Q.1 [11831809]

According to the passage, which of the following cannot be inferred as a role/function of books?

1 O Providing solitude even in the middle of a crowd.	

Solution: Correct Answer : 3 All the other options are supported by the passage.	م Answer key/Solution
4 Creating a space for introspection and engagement with the world.	
3 O Providing access to information and ideas.	
2 Allowing an individual to escape the world.	

Incorrect answers:

- 1 can be inferred from the lines "Books require a certain quiet, a solitude that is all the more valuable for the way it can be achieved in public."
- 2 is supported by the lines "I was always under the impression that books served a dual purpose: not only do they offer a world to enter, but also they offer an affordable means of escape from the world we're in."
- 4 can also be inferred from "The place of stillness that you have to go to to write, but also to read seriously, is the point where you can actually make responsible decisions, where you can actually engage productively with an otherwise scary and unmanageable world."

Books require a certain quiet, a solitude that is all the more valuable for the way it can be achieved in public. The constant barrage of information Mr Franzen describes makes the insularity of a good book all the more valuable, like an antidote.

Still, few may be inspired to follow Mr Franzen's approach for keeping the siren song of the internet at bay. "What you have to do," he explained, "is you plug in an Ethernet cable with superglue, and then you saw off the little head of it."

Q.2 [11831809] Why does the author mention the instance of reading Tolstoy through a trail of ants?
1 O To highlight the fact that the mode of delivery of literature is not important.
2 To prove that e-books can be equally effective as a mode of literature delivery.

3 O To demonstrate an impractical mode of literature delivery.	
4 O To give an example of a mode of literature delivery that the author consider	s grand.
Solution: Correct Answer: 1 The author discusses this instance to highlight the fact that he/she does not	4 Answer key/Solution

Incorrect answers:

2 - is incorrect. The author does mention e-books but that is not the central point he/she is trying to make through this example.

consider the mode of delivery to be important. Refer to the lines "The problem here is not with the e-book. I'm in favour of any mode of literature delivery."

3 and 4 - are also mentioned, but again that is not what the author wants to highlight through this example.

There is something irksome about a recent story in the New York Times that declared that "E-Books Make Readers Feel Less Isolated". Being a bookworm is uncool, the story alleges, but carrying around an e-reader makes reading seem chic.

"Strangers constantly ask about it," Michael Hughes, a communications associate at Johns Hopkins Bloomberg School of Public Health in Baltimore, said of his iPad, which he uses to read a mix of novels and nonfiction. "It's almost like having a new baby."

The problem here is not with the e-book. I'm in favour of any mode of literature delivery. If the only way I could consume Tolstoy was by having a trail of ants marching across my desk, each hoisting a piece of rice inscribed with the relevant word, that would be grand. Also, amazing. Also, impractical. Rather, I'm intrigued by the notion that e-readers make reading less antisocial. Doesn't reading necessitate not socialising? Indeed, isn't that part of the appeal?

I was always under the impression that books served a dual purpose: not only do they offer a world to enter, but also they offer an affordable means of escape from the world we're in. What a nice cloak a book can be on the subway or the train, or while sitting at a bar, enjoying the buzz of humanity while absorbed in something else. I'm reminded of Anne Tyler's "The Accidental Tourist", in which books are recommended as props for travellers who would rather avoid idle chatter with strangers.

Jonathan Franzen had something powerful to say about this in Lev Grossman's cover story about him in Time. Though few would hold Mr Franzen up as a beacon of joyful, social living (the man describes writing as "miserable work" and counts bird-watching as one of his few indulgences), he is convincing in his case for the importance of the sustained concentration demanded by reading.

"We are so distracted by and engulfed by the technologies we've created, and by the constant barrage of socalled information that comes our way, that more than ever to immerse yourself in an involving book seems socially useful... The place of stillness that you have to go to to write, but also to read seriously, is the point where you can actually make responsible decisions, where you can actually engage productively with an otherwise scary and unmanageable world."

Books require a certain quiet, a solitude that is all the more valuable for the way it can be achieved in public. The constant barrage of information Mr Franzen describes makes the insularity of a good book all the more valuable, like an antidote.

Still, few may be inspired to follow Mr Franzen's approach for keeping the siren song of the internet at bay. "What you have to do," he explained, "is you plug in an Ethernet cable with superglue, and then you saw off the little head of it."

Solution:	م Answer key/Solution
4 O The importance of reading.	
3 O The nature of the process of reading.	

The author starts the discussion by mentioning e-books and how they contrast with the traditional modes of reading. However, the central idea is what exactly characterizes the process of reading. And the author then goes on to describe several different aspects of reading, for example, the way it provides an escape, or the way it gives us a place of 'stillness'.

Incorrect answers:

1 and 2 - are not the central idea being discussed.

4 - can be considered, but the focus of the author is not on why reading is important, rather he/she is more intent on describing the process of reading and the benefits of the same.

But today, let us think about the fortunate ones with laptops and smartphones for their sole use. When the pandemic broke, their schools soon switched to online classes. But online teaching implies more than a Zoom meeting. It calls for audio-visual techniques for which most schools had neither expertise nor infrastructure. Plain vanilla classroom teaching falters without a classroom.

That is where edutech companies saw their chance. They applied digital technology expertly and intensively to the curricular content. Their instructors exuded a compelling onscreen presence, as conventional teachers had never learnt to do. The result was a package that captivated both children and parents footing the bill. Both parties were connoisseurs of onscreen content: the children from computer games, the parents from infotainment channels. The superstition is rife anyway that anything emerging from a computer is a superior option. In two short years, hitherto uncontested schooling methods acquired the negative label of 'offline teaching'.

But might not the new technology truly be superior? The digital revolution has transformed our lives. In intellectual and cultural matters, however, it has generally modified older practices instead of dislodging them altogether. More books are printed today than ever before, alongside the electronic text and the internet. Live performances flourish despite staggering advances in audio-visual recording. The equation between ageless human practice and digital innovation is subtle and complex. With education, the pandemic drastically short-circuited this adjustment.

Throughout history, teaching has implied an interaction between teacher and student. A child learns letters and numbers under a teacher's care among a group of peers. Every primary-school teacher I have asked agrees that small children cannot be taught online to read, write and count. If some learn to do so, it is because an adult is present to guide the process.

With older children, the challenge is subtler. Edutech planners will tell you that they allow for individual attention and interaction. Learners can follow their own pace, assess themselves by self-testing, and even ask questions. The interaction is largely through precoded exercises and bots, but the best (and costliest) courses find slots for human mentors. Yet all these features are worked into a pre-set, one-way system: an extended IT program, 'remote' in every sense.

To be sure, there are physical schools so ill-run that online instruction is a better alternative. But even a halfway decent institution offers the imperative human exchange. A lecturer in a classroom subconsciously attunes herself to the faces in front of her. Students' queries cover a range that artificial intelligence cannot tackle — above all because it ignores individual psychology, the personal factors impacting a student's development. A packaged online program can never overstep its boundaries, never warm to a bold question or an out-of-the-box suggestion. At most, it fosters a competent mediocrity. Hence the best students benefit the least from online courses, which stunt their potential.

Q.5 [11831809]

All of the following options map the benefits of online education as compared to traditional mode of learning, except:

1 O Infrastructure.		

Solution: Correct Answer : 2	≪ Answer key/Solution
4 Guardian's satisfaction over their ward's learning outcomes.	
3 O Self-assessment of individual learners.	
2 O Nuanced tackling of individual problems.	

The passage although provides a host of benefit to online learning, provides two caveats. One of them being, 'A lecturer in a classroom subconsciously attunes herself to the faces in front of her. Students' queries cover a range that artificial intelligence cannot tackle — above all because it ignores individual psychology, the personal factors impacting a student's development. A packaged online program can never overstep its boundaries, never warm to a bold question or an out-of-the-box suggestion. At most, it fosters a competent mediocrity. Hence the best students benefit the least from online courses, which stunt their potential.'

Thus, (2) is the correct choice.

Incorrect Answers:

- (1) The magic of online education is that the students can bypass the infrastructural deficiencies of a physical classroom. Since the technological apparatus are already in use, the modern computer-based education can be smoothly parted in a virtual setting.
- (3) In the passage it is mentioned that, 'Edutech planners will tell you that they allow for individual attention and interaction. Learners can follow their own pace, assess themselves by self-testing, and even ask questions.' This gives online learners an advantage.
- (4) The passage mentions that, 'That is where edutech companies saw their chance. They applied digital technology expertly and intensively to the curricular content. Their instructors exuded a compelling onscreen presence, as conventional teachers had never learnt to do. The result was a package that captivated both children and parents footing the bill. Both parties were connoisseurs of onscreen content: the children from computer games, the parents from infotainment channels.'

Q.6 [11831809]

Which of the following sentence	es best describe	es what the pas	sage is about?
---------------------------------	------------------	-----------------	----------------

1 \bigcirc Online education is a great divider and should be discarded immediately.

$2\bigcirc$ Online education has had a transformative positive effect on learning acrespectrum.	oss the learner demographic
$3\bigcirc$ Online education has modified some aspects of tradition teaching but is quality of students.	geared to creating a homogenous
4 The pandemic has exposed the serious deficiencies in both online and of vacuum for an evolved mode of imparting education.	fline classes thus creating a
Solution:	م Answer key/Solution

The author throughout the passage provides ample examples of how technology in general and online education in particular is modifying the older, traditional practices. But the author is also aware of the deficiencies. The author mentions how online education is on course of creating a competent mediocrity among students. They also mention how new learners will find it almost impossible to grasp basics of literacy without a certain level of hand holding from physical teachers.

Incorrect Answers:

- (1) The author never takes such an extreme take on the passage neither are their arguments black or white.
- (2) According to the passage, '. A child learns letters and numbers under a teacher's care among a group of peers. Every primary-school teacher I have asked agrees that small children cannot be taught online to read, write and count. If some learn to do so, it is because an adult is present to guide the process.' Thus, it does not benefit learners of all age groups.
- (4) This goes beyond the scope of the given passage.

Q.8 [11831809] None of the statements may be considered as a valid inference based on the passage except:
1 C Eductech companies have convinced parents that mediocrity is good enough.
2 Online classrooms potentially evolve teaching as we understand.

3 C Edutech companies employ individual growth of teachers as a selling point for	or their product.
4 O The successful edutech companies treat online teaching as a fun version of a	a corporate Zoom meeting.
Solution: Correct Answer : 2 The passage mentions that plain vanilla classroom teaching as we understand	م Answer key/Solution

The passage mentions that plain vanilla classroom teaching as we understand will not work in an online mode of teaching. It states that, 'They applied digital technology expertly and intensively to the curricular content. Their instructors exuded a compelling onscreen presence, as conventional teachers had never learnt to do. The result was a package that captivated both children and parents footing the bill.'

Incorrect answers:

(1) and (3) go beyond the scope of the passage.

Bookmark

The Holocaust of 1941 sows the traumatic memory of separation and murder in its victims. Collective or group trauma refers to an event that affects a particular group or race. Literature plays a significant role in documenting traumatic experiences and has empowered language to represent an individual's inner and external world. In an introspective novel, the narrator reveals the inner world and pours everything, including their emotions, thoughts and perspectives. Documenting the traumatic events in novels provides a cure to emotional wounds and further knowledge on how to prevent such catastrophes. It outlines the characters' identity and the meaning of the traumatic event. As an instance of trauma literature, the current project deals with the holocaust novel The World That We Knew written by American novelist Alice Hoffman.

Alice Hoffman is a well-known author who has written over thirty novels, three collections of short stories, and eight books for children and adults. The World That We Knew is a historical fiction written in the background of World War II. Trauma studies began in the 1860s, as psychiatrists noticed unusual behaviour with no apparent cause. In 1896, Sigmund Freud came up with the 'Seduction theory' due to his observation of trauma faced by women. Freud posits two elements as recurring factors seen in traumatic patients. First is the resistance of traumatic patients to speak about their trauma. They do not acknowledge their fears. Herman suggested, "The conflict between the will to deny horrible events and the will to proclaim them aloud is the central dialectic of psychological trauma". Freud opines that this conflict is seen in the forced silence of traumatic patients. The second recurring element seen between trauma and the modernist fiction narrative is the connection between trauma through its manifestation as madness. Insanity is often portrayed in modernist trauma fiction. "Forced to experience the shattering effects of unprecedentedly destructive weaponry, mass, mechanised slaughter and inhuman trench conditions, hundreds of thousands of soldiers were seen to suffer breakdowns". Apart from Freud, the researchers who analysed trauma include Joseph Breuer, Jean-Martin Charcot, Herman Oppenheim, Pierre Janet and Marton Prince. Freud wrote his early theories in Studies on Hysteria (1895) with Joseph Breuer. They stated that it was not the events but the remembrance is traumatic. Hence the process of remembrance causes psychological pain, and value is provided to the repressed events in the consciousness. This traumatic remembrance is termed 'pathogenic remembrance' for the pathologic symptoms the memory causes. Freud, throughout his career, took up the notion of trauma as causing dissociation or a split in the psyche. Cathy Caruth examined the concept of trauma-based on the roles in literature and society in the 1990s. This was considered the first wave of traumatic criticism. It presents trauma as an event that creates contradiction in language and experience. Cathy Caruth's Unclaimed Experience: Trauma, Narrative, History (1996) interprets Freud's theory on language. She states that the latency and dissociation of the psyche represent a traumatic experience. Latency and dissociation create a temporal gap. Caruth states that trauma is a "shock that appears to work very much like a bodily threat but is, in fact, a break in the mind's experience of time". Later, a pluralistic model analyses the latency and dissociation effect and the cultural dimensions of trauma and narrative expressions. This model connects the experience, language and social significance of trauma.

Q.9 [11831809]

According to the second paragraph of the passage, "Insanity is often portrayed in modernist trauma fiction." Which one of the following most broadly captures the reason why insanity was common among people?

1 O Instances of fratricide were rampant during the said period.
2 Weapons of mass destruction that included nuclear weapons pushed men into the brink of mental disorder.

3 O the apocalyptic effects of warfare had a disastrous effect on individuals.	
4 O the systematic genocide by majoritarian rulers affected the mental health of	of individuals.
Solution: Correct Answer : 3 Option 3 can be explained in the light of the following sentence, "Forced to	م Answer key/Solution

Incorrect answers:

Fratricide that means the accidental killing of one's own forces in war has not been mentioned in the passage. Therefore, option (1) is incorrect.

experience the shattering effects of unprecedentedly destructive weaponry"

The author mentions destructive weaponry but whether that includes nuclear weapons is unclear. Therefore, option (2) is incorrect.

Mass slaughter has been mentioned but whether mass slaughter or genocide was by majoritarian rulers is unclear. Hence, option (4) is incorrect.

The Holocaust of 1941 sows the traumatic memory of separation and murder in its victims. Collective or group trauma refers to an event that affects a particular group or race. Literature plays a significant role in documenting traumatic experiences and has empowered language to represent an individual's inner and external world. In an introspective novel, the narrator reveals the inner world and pours everything, including their emotions, thoughts and perspectives. Documenting the traumatic events in novels provides a cure to emotional wounds and further knowledge on how to prevent such catastrophes. It outlines the characters' identity and the meaning of the traumatic event. As an instance of trauma literature, the current project deals with the holocaust novel The World That We Knew written by American novelist Alice Hoffman.

Alice Hoffman is a well-known author who has written over thirty novels, three collections of short stories, and eight books for children and adults. The World That We Knew is a historical fiction written in the background of World War II. Trauma studies began in the 1860s, as psychiatrists noticed unusual behaviour with no apparent cause. In 1896, Sigmund Freud came up with the 'Seduction theory' due to his observation of trauma faced by women. Freud posits two elements as recurring factors seen in traumatic patients. First is the resistance of traumatic patients to speak about their trauma. They do not acknowledge their fears. Herman suggested, "The conflict between the will to deny horrible events and the will to proclaim them aloud is the central dialectic of psychological trauma". Freud opines that this conflict is seen in the forced silence of traumatic patients. The second recurring element seen between trauma and the modernist fiction narrative is the connection between trauma through its manifestation as madness. Insanity is often portrayed in modernist trauma fiction. "Forced to experience the shattering effects of unprecedentedly destructive weaponry, mass, mechanised slaughter and inhuman trench conditions, hundreds of thousands of soldiers were seen to suffer breakdowns". Apart from Freud, the researchers who analysed trauma include Joseph Breuer, Jean-Martin Charcot, Herman Oppenheim, Pierre Janet and Marton Prince. Freud wrote his early theories in Studies on Hysteria (1895) with Joseph Breuer. They stated that it was not the events but the remembrance is traumatic. Hence the process of remembrance causes psychological pain, and value is provided to the repressed events in the consciousness. This traumatic remembrance is termed 'pathogenic remembrance' for the pathologic symptoms the memory causes. Freud, throughout his career, took up the notion of trauma as causing dissociation or a split in the psyche. Cathy Caruth examined the concept of trauma-based on the roles in literature and society in the 1990s. This was considered the first wave of traumatic criticism. It presents trauma as an event that creates contradiction in language and experience. Cathy Caruth's Unclaimed Experience: Trauma, Narrative, History (1996) interprets Freud's theory on language. She states that the latency and dissociation of the psyche represent a traumatic experience. Latency and dissociation create a temporal gap. Caruth states that trauma is a "shock that appears to work very much like a bodily threat but is, in fact, a break in the mind's experience of time". Later, a pluralistic model analyses the latency and dissociation effect and the cultural dimensions of trauma and narrative expressions. This model connects the experience, language and social significance of trauma.

Q.10 [11831809]

- .:				1.1			
From the passage, we c	an inter	that the	author is v	/erv likel\	/ to	believe	that:

1 O The World That We Knew represented events that occurred in the second half of the previous century.
2 O In a brooding novel, the narrator lays emphasis on the psychic contours of the characters.
3 Trauma Studies involved peculiar behavior that had a specific cause.

4 O There is no connection between trauma literature and modern fiction narrative.

Solution:

Correct Answer: 2

Option (2) is the correct answer because, "in an introspective novel, the narrator reveals the inner world and pours everything, including their emotions, thoughts and perspectives."

Answer key/Solution

Incorrect answers:

Option (1) is the incorrect answer because The World That We Knew is a holocaust novel. The Holocaust happened in 1941.

Option (3) is incorrect because "Trauma studies began in the 1860s, as psychiatrists noticed unusual behaviour with no apparent cause." So, no apparent cause could be found.

Option (4) is incorrect because there is a connection between trauma studies and modern fiction narrative. Refer: "The second recurring element seen between trauma and the modernist fiction narrative is the connection between trauma through its manifestation as madness."

The Holocaust of 1941 sows the traumatic memory of separation and murder in its victims. Collective or group trauma refers to an event that affects a particular group or race. Literature plays a significant role in documenting traumatic experiences and has empowered language to represent an individual's inner and external world. In an introspective novel, the narrator reveals the inner world and pours everything, including their emotions, thoughts and perspectives. Documenting the traumatic events in novels provides a cure to emotional wounds and further knowledge on how to prevent such catastrophes. It outlines the characters' identity and the meaning of the traumatic event. As an instance of trauma literature, the current project deals with the holocaust novel The World That We Knew written by American novelist Alice Hoffman.

Alice Hoffman is a well-known author who has written over thirty novels, three collections of short stories, and eight books for children and adults. The World That We Knew is a historical fiction written in the background of World War II. Trauma studies began in the 1860s, as psychiatrists noticed unusual behaviour with no apparent cause. In 1896, Sigmund Freud came up with the 'Seduction theory' due to his observation of trauma faced by women. Freud posits two elements as recurring factors seen in traumatic patients. First is the resistance of traumatic patients to speak about their trauma. They do not acknowledge their fears. Herman suggested, "The conflict between the will to deny horrible events and the will to proclaim them aloud is the central dialectic of psychological trauma". Freud opines that this conflict is seen in the forced silence of traumatic patients. The second recurring element seen between trauma and the modernist fiction narrative is the connection between trauma through its manifestation as madness. Insanity is often portrayed in modernist trauma fiction. "Forced to experience the shattering effects of unprecedentedly destructive weaponry, mass, mechanised slaughter and inhuman trench conditions, hundreds of thousands of soldiers were seen to suffer breakdowns". Apart from Freud, the researchers who analysed trauma include Joseph Breuer, Jean-Martin Charcot, Herman Oppenheim, Pierre Janet and Marton Prince. Freud wrote his early theories in Studies on Hysteria (1895) with Joseph Breuer. They stated that it was not the events but the remembrance is traumatic. Hence the process of remembrance causes psychological pain, and value is provided to the repressed events in the consciousness. This traumatic remembrance is termed 'pathogenic remembrance' for the pathologic symptoms the memory causes. Freud, throughout his career, took up the notion of trauma as causing dissociation or a split in the psyche. Cathy Caruth examined the concept of trauma-based on the roles in literature and society in the 1990s. This was considered the first wave of traumatic criticism. It presents trauma as an event that creates contradiction in language and experience. Cathy Caruth's Unclaimed Experience: Trauma, Narrative, History (1996) interprets Freud's theory on language. She states that the latency and dissociation of the psyche represent a traumatic experience. Latency and dissociation create a temporal gap. Caruth states that trauma is a "shock that appears to work very much like a bodily threat but is, in fact, a break in the mind's experience of time". Later, a pluralistic model analyses the latency and dissociation effect and the cultural dimensions of trauma and narrative expressions. This model connects the experience, language and social significance of trauma.

Q.11 [11831809] The author mentions Freud and Breuer to show that:
1 Memory can be disquieting.
2 Memory can evoke suicidal tendencies in individuals.
3 C Remembrance is traumatic even though events may be positive.

4 Remembrance causes physiological pain.

Solution:

Correct Answer: 1

Answer key/Solution

Option (1) is the correct answer because it is mentioned in the passage that "They stated that it was not the events but the remembrance is traumatic."

Incorrect answers:

Option (2) cannot be the answer because suicidal tendency is not mentioned in the passage although remembrance can be traumatic.

Option (3) is incorrect because nothing in the passage suggests that events may be positive. Refer to: "They stated that it was not the events but the remembrance is traumatic."

Option (4) is not true because as per the passage, "Remembrance causes psychological pain."

First is the resistance of traumatic patients to speak about their trauma. They do not acknowledge their fears. Herman suggested, "The conflict between the will to deny horrible events and the will to proclaim them aloud is the central dialectic of psychological trauma". Freud opines that this conflict is seen in the forced silence of traumatic patients. The second recurring element seen between trauma and the modernist fiction narrative is the connection between trauma through its manifestation as madness. Insanity is often portrayed in modernist trauma fiction. "Forced to experience the shattering effects of unprecedentedly destructive weaponry, mass, mechanised slaughter and inhuman trench conditions, hundreds of thousands of soldiers were seen to suffer breakdowns". Apart from Freud, the researchers who analysed trauma include Joseph Breuer, Jean-Martin Charcot, Herman Oppenheim, Pierre Janet and Marton Prince. Freud wrote his early theories in Studies on Hysteria (1895) with Joseph Breuer. They stated that it was not the events but the remembrance is traumatic. Hence the process of remembrance causes psychological pain, and value is provided to the repressed events in the consciousness. This traumatic remembrance is termed 'pathogenic remembrance' for the pathologic symptoms the memory causes. Freud, throughout his career, took up the notion of trauma as causing dissociation or a split in the psyche. Cathy Caruth examined the concept of trauma-based on the roles in literature and society in the 1990s. This was considered the first wave of traumatic criticism. It presents trauma as an event that creates contradiction in language and experience. Cathy Caruth's Unclaimed Experience: Trauma, Narrative, History (1996) interprets Freud's theory on language. She states that the latency and dissociation of the psyche represent a traumatic experience. Latency and dissociation create a temporal gap. Caruth states that trauma is a "shock that appears to work very much like a bodily threat but is, in fact, a break in the mind's experience of time". Later, a pluralistic model analyses the latency and dissociation effect and the cultural dimensions of trauma and narrative expressions. This model connects the experience, language and social significance of trauma.

Q.12 [11831809] Where could the passage have been taken from?
1 O Translations of the holocaust novels.
2 An autobiographical account by Joseph Breuer.
3 An academic journal that focuses only on social sciences.

4 O An academic journal that focuses on trauma and related fields.

Solution:

Correct Answer: 4

Answer key/Solution

Option (4) is the correct answer because the passage is from a research project.

Note the usage of 'current project' in "As an instance of trauma literature, the current project deals with the holocaust novel The World That We Knew written by American novelist Alice Hoffman."

Incorrect answers:

Option (1) is incorrect because nothing in the passage suggests translated works.

Option (2) is incorrect because the passage is clearly not an autobiography. It is more of a research article.

Option (3) is incorrect because the passage discusses literature. The usage of the word 'only' makes the option incorrect. The passage discusses literature as well.

[...] Small-ranged species are disproportionately at risk of extinction. The "Red List" of the International Union for the Conservation of Nature (IUCN) aspires to assess the risks of extinction of all species. It has done so for more than 90,000 plant and animal species, out of a total of nearly 2 million species that taxonomists have described. Birds, mammals, and amphibians are the best known. Overwhelmingly, it's the species with small geographical ranges that are at greatest risk. For birds, the risk of extinction drops dramatically as range size increases. About half the species with ranges smaller than 1,000 square kilometres are at risk.

This pattern is not surprising. Other things being equal, the destruction of habitats is more likely to terminate a species that occurs, for instance, on a few mountaintops in coastal Brazil, than one that occurs across the entire Amazon basin. The challenge for conservation science is what we can do to protect these threatened species.

We now know that species with small geographical ranges, which are so often threatened, are concentrated in certain places. And in these mostly tropical concentrations, human actions not only destroy habitats but also leave what's behind in small, isolated fragments. These patches may be too small to sustain viable populations of species. Restoring corridors—habitat connections between fragments—affords a cost-effective solution. [...]

Many more species with small geographical ranges are known now than in Darwin and Wallace's time. By 1850, taxonomists had described close to 5,000 terrestrial bird species in the world. [...] In 1850, 14 years after Darwin returned from his voyage, only 200 (4 percent) of the known species at that time had ranges smaller than 10,000 square kilometres. Today, that number is 1,290—close to 13 percent of the more than 10,000 species now known.

We're still finding more such species. Taxonomists have described half of the known amphibian and mammalian species with small ranges in the past few decades. Many more are surely awaiting discovery. As with birds, large-ranged species were discovered earlier than small-ranged ones.

The century and a half of exploration since the travels of Darwin and Wallace has made it possible to produce three key maps that show the areas that have, respectively, the greatest numbers of species, the greatest numbers of species with small ranges, and the greatest numbers of species that are threatened with extinction. Geography is destiny. Understanding the relationships between these geographical patterns is the first vital step in determining where to act to save species.

The greatest numbers of species in a given place are in the tropical moist forests of the world. The patterns are broadly similar for birds, mammals, and amphibians—the taxa we know best. Less geographically resolved data for insects and plants suggest the patterns are also broadly similar. Wallace went to the Amazon because that's where the most species are! He made his living collecting novelties—species other collectors had not discovered. He likely thought that more species would mean more novelties—but he was partly wrong. [...]

Solution: Correct Answer : 3	م Answer key/Solution
4 O To restore the lost habitats of all extinct species.	
3 O To protect the habitats of threatened species with a small geographical	range.
2 O To find measures to contain the habitats of all animals at risk.	
1 O To identify the exact range of species that are under threat.	
Q.13 [11831809] As per the author, what is the most significant challenge for conservation sci	ence?

Incorrect answers:

Option 1 - It is not mentioned even as a challenge.

Option 2 – 'All animals' makes it less important. The passage focuses on the species with the greatest risk: species with small habitat range.

Option 4 – Too broad and 'lost habitats of extinct species' doesn't make sense.

Bookmark

Q.16 [11831809] As per the passage, which of the following species is at the highest risk of extinction? 1 Species with ranges over 1,000 square kilometers. 2 Species found in the Amazon. 3 Species with very limited habitat range. 4 Birds, mammals, and amphibians Solution: Correct Answer: 3 This is a fact-based question. The main idea of the passage focuses on the species under the greatest threat: species with limited and small geographical

Incorrect answers:

Option 1 - Factually wrong (less not more)

Option 2 – Factually wrong. These species have a wide habitat range.

range in terms of habitats. So, option 3 is the direct answer.

Option 3 - Too generic. It is mentioned in the passage in a different context.

Q.17 [11831809]

Directions for question (17): The four sentences (labelled 1, 2, 3, and 4) given in this question, when properly sequenced, form a coherent paragraph. Decide on the proper order for the sentences and key in this sequence of four numbers as your answer.

- 1.Because hummingbirds use so much energy, with a heart rate from 450-1300 beats per minute, they must consume several times their body weight in nectar each day.
- 2. Their heart rate falls to 35-50 beats per minute at night and their body temperature approaches the surrounding temperature.
- 3. Hummingbirds are the second largest bird family in the New World, with 320 species, and are some of the smallest birds in the world.
- 4. In addition, hummingbirds conserve energy by falling into a comatose-like state at night.

Solution:

Correct Answer: 3142

Answer key/Solution

The strongest clue we have in this paragraph is 'in addition' in sentence 4. It adds to the idea of energy which is mentioned in sentence 1. So, 14 is a pair.

2 explains the 'comatose' state mentioned in 4. So, 42 is a pair too.

Sentence 3 has to be the opening sentence because of its scope. So, 3142 is the correct sequence.

Bookmark

Q.18 [11831809]

Directions for question (18): The four sentences (labelled 1, 2, 3, and 4) given in this question, when properly sequenced, form a coherent paragraph. Decide on the proper order for the sentences and key in this sequence of four numbers as your answer.

- 1. I carted it in a wheelbarrow and set it down by the pond.
- 2. Before leaving, he also showed me how to form them into fist-sized balls.
- 3. About a week after we started filling the pond, he ordered me to bring out the coil of copper wire from the tool shed.
- 4. Using a pair of wire-cutters, he snipped the copper into short lengths.

Solution:

Correct Answer: 3142

Answer key/Solution

This is a narrative paragraph. So, the sequence should be easy to decide. All the sentences use pronouns. So, it is safe to assume that this is part of a larger narrative.

Sentence 3 talks about an order (coil of copper wire). So, it has to be the first sentence. All the other sentences explain the sequence that follows.

1 has the pronoun 'it' which refers to the copper wire.

4 talks about cutting the wire. Sentence 2 has the word 'also'. So 42 is the correct order. Hence, the correct sequence is 3142.

Q.19 [11831809]

Directions for question (19): The passage given below is followed by four summaries. Choose the option that best captures the author's position.

When scientists announced last month they had determined the exact order of all 3 billion bits of genetic code that go into making a chimpanzee, it was no surprise that the sequence was more than 96 percent identical to the human genome. Charles Darwin had deduced more than a century ago that chimps were among humans' closest cousins. But decoding chimpanzees' DNA allowed scientists to do more than just refine their estimates of how similar humans and chimps are. It let them put the very theory of evolution to some tough new tests.

or now offinial flamation and offinipo are. It let them put the very theory or evolution to dome tought new teste.
1 A smidgeon of cells 3.5 billion years ago could give rise to the astonishing tapestry of biological diversity that today thrives on Earth.
$2\bigcirc$ Evolution's repeated power to predict that genetic codes go a long way in the making of the chimpanzees has been definitely upheld.
$3\bigcirc$ One only believes theories when they make non-obvious predictions that are confirmed by scientific evidence even if it is Darwin's theory.

4 Scientists continued to uphold Darwin's chimp-cousin theory after considerable substantiation. Solution: Answer key/Solution **Correct Answer: 4** The passage talks about vindication of Darwin's theory making option (4) correct. Incorrect answers: 1 - This is too generic. 2 - 'Definitively' is extreme. 3 - This is not the point being made. Bookmark FeedBack Q.20 [11831809] Directions for question (20): Five sentences related to a topic are given below. Four of them can be put together to form a meaningful and coherent short paragraph. Identify the odd one out. 1. The insulin then helps break down the sugars, which either provide immediate energy or go into fat cells for storage. 2. A few recent studies suggest that consuming fake sugar actually trains your insulin response to store more, not less, fat. 3. If your body interprets something as sweet which is not real sugar, it ends up producing that same insulin response. 4. The main one is that artificial sweeteners are actually better for you than real sugar. 5. Basically, when you consume real sugar, your taste-buds send an alert to your pancreas saying that calories are on the way. Solution: Answer key/Solution **Correct Answer: 4** The correct order is 2513. All these sentences talk about how artificial sugars affect the pancreas. The sentences explain the process. Sentence 4 starts with 'the main one'. It has no connection with any other sentence. So, this is the odd one out. Bookmark FeedBack

Q.21 [11831809]

Directions for question (21): The four sentences (labelled 1, 2, 3, and 4) given in this question, when properly sequenced, form a coherent paragraph. Decide on the proper order for the sentences and key in this sequence of four numbers as your answer.

- 1. Even if we do manage time away from the grind, it comes with a looming awareness of the things we should be doing.
- 2. We put off sleeping in, or going for a long walk, or reading by the window.
- 3. The break that we take, thus, ends up being an experience weighed down by guilt.
- 4. The problem comes when we spend so long frantically chasing productivity, we refuse to take real breaks.

Solution:

Correct Answer: 4213

Answer key/Solution

Sentence 3 has the linking word 'thus'. So, it is the concluding sentence of the paragraph. 3 defines the effect of not taking real breaks.

4 opens the paragraph by introducing the topic: how we don't take breaks. 2 explains this further.

1 gives a contradiction: how the breaks we take (even if we do) are not real breaks.

So, the correct sequence is 4213.

Q.22 [11831809]

Directions for question (22): The passage given below is followed by four summaries. Choose the option that best captures the author's position.

A guilt trip involves causing another person to feel guilt or a sense of responsibility to change their behavior or take a specific action. Because guilt can be such a powerful motivator of human behavior, people can wield it as a tool to change how others think, feel, and behave. Sometimes this might involve leaning on something that someone already feels guilty about. In other cases, people might induce feelings of unjustified guilt or responsibility to manipulate the other person's emotions and behaviors. If someone has ever made you feel bad about something you've done (or didn't do) and then used those bad feelings to get you to do something for them, then you have experience with guilt trips.

1 O A guilt trip may affect only those very few people who have a weak sense of self-worth that is accompanied with a low emotional quotient.
2 A guilt trip makes people feel guilty and change their behaviour and it can be used as a tool by some to manipulate emotions and behaviours of others.
3 Those people who already feel guilty about something are easily affected by a guilt trip and they allow themselves to be emotionally manipulated by others.
4 Guilt is not always a bad thing; on the contrary, it can be used as a powerful tool to change people for the better and if used correctly, can act as a motivator.

Solution:

Correct Answer: 2

Answer key/Solution

The passage talks about guilt trip and invoking feelings of guilt to change someone's behaviour. Therefore, option (2) is the answer.

Incorrect answers

- (1) Weak sense of self-worth is not mentioned in the passage.
- (3) This option misses out on what a guilt trip actually is and hence, it cannot summarize the passage.
- (4) This is partly true but it focusses on only one trivial aspect of the passage.

Q.23 [11831809]

Directions for question (23): Five jumbled up sentences related to a topic is given below. Four of them can be put together to form a coherent paragraph. Identify the odd one out and key in the number of the sentence as your answer.

- 1. While it supports a sizeable population of wild tigers and other wildlife, it is also an ecologically fragile and climatically vulnerable region that is home to over 4.5 million people.
- 2. The landscape is constantly being transformed by the erosional forces of the sea and wind along the coast and by the enormous loads of silt and other sediments that are deposited along the myriad estuaries.
- 3. Short term goals include interventions such as ensuring sustainable livelihoods, access to clean and sustainable energy, and effective human wildlife conflict management.
- 4. The Sundarbans delta in India has been a priority region for WWF-India since 1973 due to its unique biodiversity.
- 5. Securing the future of the Sundarbans, its biodiversity, and people requires a long term vision that can integrate climate adaptation and conservation strategies.

Solution:

Correct Answer: 2

Answer key/Solution

The correct order is 4153.

Sentences 5 and 3 talk about strategies to protect the biodiversity of Sundarbans.

Sentence 4 is the opening sentence as it introduces the delta.

So, the odd sentence can be 1 or 2. Sentence 1 talks about biodiversity, the theme of the paragraph.

Sentence 2 talks about the erosion of the landscape. It might be part of the theme, but it doesn't fit into this paragraph. So, 2 is the odd one out.

Q.24 [11831809]

Directions for question (24): The passage given below is followed by four summaries. Choose the option that best captures the author's position.

Do animals have free will? Probably, the answer to that question would be agreed by most people to be a fairly obvious "no." The concept of free will is traditionally bound up with such things as our capacity to choose our own values, the sorts of lives we want to lead, the sorts of people we want to be, etc. and it seems obvious that no non-human animal lives the kind of life which could make sense of the attribution to it of such powers as these. But in thinking about free will, it is essential, nevertheless, to consider the capacities of animals. Even if animals cannot be said to have full-blown free will, animal powers of various sorts provide a kind of essential underpinning for free will which philosophers who focus too exclusively on the human phenomenon are forever in danger of ignoring.

1 O Non-humans are yet to be studied extensively in order to understand whether they have the power for free will.
2 Unlike humans who are, no doubt, capable of free will, non-humans have not been proven, even by the greatest of scholars, to possess the power of free will.
3 We should consider animals as non-human who possess the capacity to demonstrate various powers in a non-verbal communication.
4 Only humans are considered capable of free will, so the idea that non-humans such as animals show capacities that demonstrate some level of free will is ignored.
Solution:

Correct Answer: 4

& Answer key/Solution

The passage talks about free will which is thought be a power exclusive to humans, however, it is seen that the various capacities of animals support the idea that they also possess free will, even though that is not accepted. Therefore, the only option that encapsulates the passage is the 4th one.

Incorrect answers

- (1) The need for extensive study of non-humans is not mentioned in the passage.
- (2) Philosophers are said to focus exclusively on humans; however, it is not said that scholars have not proven that non-humans are incapable of free will.
- (3) The free will and humans are not included in the option.
